

ARMS 2024 CONFERENCE ABSTRACT

Theme: Bringing philanthropists, public research and industry research closer together

Title: Global Collaboration in philanthropy, public research, and industry: How is this pivotal for impactful research management

Authors: Joana Lamego, Bruno Ceña - The Champalimaud Foundation, Bella Blaher & Jan Seesod - The University of Melbourne

Abstract:

We propose an engaging pre-conference workshop under the ARMS 2024 sub-theme "Bringing philanthropists, public research, and industry research closer together." Utilizing a hands-on case-study approach, we will delve into cross-continental successes and pitfalls in aligning these diverse stakeholders.

The Strategic Research and Development team of the Champalimaud Foundation, a Portuguese private non-profit institute with public-utility status, together with the equivalent team from the University of Melbourne, will lead this hands-on workshop aimed at empowering each participant with concrete tools to be adjusted and implemented to their working ecosystems.

Embarking on the exploration of the Champalimaud Foundation's and of the University of Melbourne's innovative collaborative models, we'll spotlight how the local context shapes its global implementation. Testimonials from internal stakeholders will showcase the dynamic synergy among researchers, clinical practitioners, and managers in crafting creative solutions. The session will underscore the imperative of aligning stakeholder goals through effective cross-sectoral communication for enduring and impactful alliances, promoting research and fostering wealthier and healthier societies.

Attendees will be actively invited to contribute to a collective brainstorming session on navigating intra-organizational challenges. Employing a problem-based learning (PBL) approach, real-case studies will be shared, providing practical strategies beneficial for daily research management in this dynamic interface.

Expected learning outcomes include but are not limited to: identify the pitfalls of collaborating globally; aligning stakeholder goals through effective cross-sectoral communication; foster a synergy that can address complex global challenges more effectively than any single sector could alone; employing a problem-based learning approach to global collaboration.

Join us in unravelling the threads that weave successful collaborations in research administration.
